MOHAMMADHADI KAFI

Senior DevOps & Infrastructure Engineer

Email: mohammadhadikafi@gmail.com | Phone: +98 990 388 8895 | Location: Tehran, Iran
Website: hadikafi.me | LinkedIn: linkedin.com/in/hadikafi | GitHub: github.com/hadikafi

SUMMARY

Senior DevOps & Infrastructure Engineer with extensive experience architecting **air-gapped** Kubernetes environments, **bare-metal** AI compute clusters, and resilient data streaming pipelines. Proven track record in supporting mission-critical banking platforms with **zero-downtime** requirements, building fault-tolerant database architectures, and maintaining service reliability and disaster recovery through upstream connectivity outages.

WORK EXPERIENCE

AdanAI *Tehran, Iran*
DevOps Engineer *Mar 2026 – Present*

- Maintain **zero-downtime** operations for "**Dima**," a mission-critical AI banking assistant (**Bank Mellat**), by redesigning and optimizing load balancing and failover architectures.
- Provisioned and configured **bare-metal** AI infrastructure from scratch, setting up a Dell PowerEdge XE9680 server equipped with 8× **NVIDIA H200** GPUs.
- Deployed and optimized the Qwen 3.6 model for production inference using vLLM, tuning serving parameters to achieve maximum throughput and low latency.
- Architected high-availability (HA) infrastructure for "**Narenjestan**," a RAG-powered internal AI assistant supporting **Bank Mellat** branch personnel with on-demand technical queries; deployed fault-tolerant clusters for Elasticsearch, Qdrant, PostgreSQL, MongoDB, and Redis.
- Deployed internal Sonatype Nexus instances to cache build dependencies and maintain uninterrupted **CI/CD** workflows during broad network and upstream internet outages.
- Built self-hosted collaboration infrastructure (Nextcloud with integrated chat and video conferencing), ensuring secure remote work and internal communication through connectivity blackouts.
- Engineered **automated**, offsite virtual machine backup and disaster recovery pipelines to safeguard critical systems and state against physical datacenter threats.

Pooya *Tehran, Iran*
DevOps Engineer *Sep 2022 – Mar 2026*

- Built and maintained an on-premise Kubernetes cluster (3 Control Plane, 9 Worker nodes) in a restricted, **air-gapped** network for enterprise workloads.
- Provisioned high-throughput data and streaming clusters inside Kubernetes—including Kafka, ClickHouse, Apache Spark, MongoDB, MinIO, and Redis—powering an online fraud detection platform for **Bank Refah**.
- Migrated internal teams from manual deployments to **automated CI/CD** pipelines using Jenkins and Argo CD, standardizing delivery workflows.
- Deployed and configured Sonatype Nexus as a centralized artifact and proxy repository to resolve **air-gapped** dependency management across build systems.
- **Automated** OS-level configuration, recurring maintenance, and security patch rollouts across Linux servers using Ansible playbooks.
- Implemented deep database observability by integrating dedicated Prometheus exporters (MongoDB and Oracle exporters) into production clusters.
- Designed unified Grafana dashboards covering host metrics, service **SLAs**,

EDUCATION

M.Sc. in Computer Engineering – Software
Khatam University
2024 – Present

B.Sc. in Computer Engineering
Babol Noshirvani University of Technology
Graduated: 2024

PERSONAL DETAILS

Location / Residence:
Central Tehran, Iran

Date of Birth:
2000/09/30

Military Service:
Educational Exemption

LANGUAGES

Persian: Native
English: Professional Working Proficiency

CORE FOCUS

- High-Availability Systems
- **Air-Gapped** Environments
- **Bare-Metal** AI Deployments
- Disaster Recovery / Backups
- Multi-Site Enterprise Networks
- Telecom & Banking Platforms

and business-level transactions for maintained systems.

- Deployed centralized logging stacks with Grafana Loki and containerized legacy backend services with Docker.

TECHNICAL SKILLS

AI Infra & LLM Serving: vLLM, **NVIDIA H200** GPUs, CUDA, Dell PowerEdge XE9680, Qwen Models, Model Inference Optimization

Orchestration & Containers: Kubernetes (**Air-Gapped**, **Bare-Metal**), Docker, Docker Compose, Argo CD (GitOps), Jenkins, Ansible

Observability & Monitoring: Prometheus, Alertmanager, Grafana Dashboards, Loki, ELK Stack, Distributed Tracing, DB Exporters

Databases & Streaming: ClickHouse, Kafka, Apache Spark, PostgreSQL HA, Oracle, MongoDB Clusters, Redis HA/Sentinel, Qdrant, MinIO

Networking & Systems: Linux (Ubuntu, Rocky Linux), TCP/IP, UDP, DNS, DHCP, TLS/SSL, WebSockets (WS), Nginx Reverse Proxies, MikroTik (RouterOS, Mangle, Wireless), Cisco Catalyst Switching, Sonatype Nexus, Harbor, High Availability / DR

KEY PROJECTS

Corporate Multi-Site Network Infrastructure *Enterprise Project*

- Designed and executed complete active and passive network infrastructure from ground up for an enterprise office accommodating 20+ staff members, integrating Cisco Catalyst switches and MikroTik edge routers.
- Established an inter-office Point-to-Point (PtP) wireless bridge using MikroTik LHG 5 ax radios; analyzed spectral interference and optimized channel frequencies to deliver stable, high-throughput transmission.
- Implemented policy-based routing (PBR) on MikroTik RouterOS using firewall Mangle rules and dynamic address lists, achieving domestic vs. international traffic separation.
